

**IN THE CLAIMS:**

**Please cancel Claims 1 - 10 and add new Claims 11 - 30 as follows:**

**AMENDMENTS TO THE CLAIMS:**

1 – 10 (Canceled)

11. (New) A storage compartment for a refrigeration device, comprising:  
a frame including at least two elongated arms located at a fixed distance from one another forming an intermediate space therebetween; and  
a holder for refrigerated products configured to rest on said arms, said holder engaging in a locating manner into said intermediate space.
12. (New) The storage compartment according to claim 11, including said two arms are constructed contiguous and in one piece.
13. (New) The storage compartment according to claim 11, including said frame surrounding said intermediate space.
14. (New) The storage compartment according to claim 11, including said two arms each have one end connected to a common anchoring portion and one free end.
15. (New) The storage compartment according to claim 11, including said refrigerated-goods holder formed as a container having an interior which extends below said arms when said refrigerated-goods holder rests on said arms.
16. (New) The storage compartment according to claim 15, including said container having a cover.
17. (New) The storage compartment according to claim 11, including said refrigerated-goods holder formed as a supporting plate resting on said arms, said

supporting plate provided on its underside with at least one projection for locating engagement into said intermediate space.

18. (New) The storage compartment according to claim 17, including a container-like cover allocated to said supporting plate.
19. (New) The storage compartment according to claim 18, including said container-like cover can be inserted as a refrigerated-goods holder in said frame.
20. (New) The storage compartment according to claim 11, including said arms mounted on an inner side of a door of a refrigeration device.
21. (New) A refrigeration device, comprising:  
a body having an interior refrigerating compartment;  
said compartment including at least one wall and at least two fixing spigots mounted thereon;  
a storage compartment mountable on said fixing spigots;  
said storage compartment including a frame having at least two elongated arms located at a fixed distance from one another forming an intermediate space therebetween; and  
a holder for refrigerated products configured to rest on said arms, said holder engaging in a locating manner into said intermediate space.
22. (New) The refrigeration device according to claim 21, including said two arms are constructed contiguous and in one piece.
23. (New) The refrigeration device according to claim 21, including said frame surrounding said intermediate space.

24. (New) The refrigeration device according to claim 21, including said two arms each have one end connected to a common anchoring portion and one free end.
25. (New) The refrigeration device according to claim 21, including said refrigerated-goods holder formed as a container having an interior which extends below said arms when said refrigerated-goods holder rests on said arms.
26. (New) The refrigeration device according to claim 25, including said container having a cover.
27. (New) The refrigeration device according to claim 21, including said refrigerated-goods holder formed as a supporting plate resting on said arms, said supporting plate provided on its underside with at least one projection for locating engagement into said intermediate space.
28. (New) The refrigeration device according to claim 27, including a container-like cover allocated to said supporting plate.
29. (New) The refrigeration device according to claim 28, including said container-like cover can be inserted as a refrigerated-goods holder in said frame.
30. (New) The refrigeration device according to claim 21, including said compartment wall is a door and said arms mounted on an inner side of said door.
